Managing Maps in the Explore Portal for inReach Explorer+

Administrator - 2017-09-19 - 0 Comments - in How-To

The inReach Explorer+ allows you to manage the maps that come preloaded on your device as well as provide you with the ability to add additional maps for other areas of the world. These maps include: North American Topo Maps, OpenStreet Maps, and Digital Atlas of the Earth.

Note: The inReach Explorer+ uses DeLorme maps

To view, add or delete maps from your inReach Explorer+, perform the following:

1. Login to inreach.garmin.com
2. Navigate to the **Map** tab
3. Select **Get More Maps**

4. From the **Topographic Maps** tab, expand the region(s) of interest and select from the regional maps and map types available.

[Done](#)

inReach Map Selection

Travelling outside the range of your pre-installed inReach maps? Want to try some alternative maps? Use the **Sync** tab above to apply changes to your inReach.

= These maps are pre-installed and cannot be changed. = Sync is off. These maps will not be on your inReach. = Sync is on. These maps will be on your inReach.

Total selected to sync: 943 MB of 12 GB.

TOPOGRAPHIC MAPS **HUNTING MAPS** [About Map Types](#)

North America (3 Selected)

<input type="checkbox"/> Alabama	<input type="checkbox"/> Iowa	<input type="checkbox"/> New Hampshire	<input type="checkbox"/> Quebec
<input type="checkbox"/> Alaska	<input type="checkbox"/> Kansas	<input type="checkbox"/> New Jersey	<input type="checkbox"/> Rhode Island
<input type="checkbox"/> Alberta	<input type="checkbox"/> Kentucky	<input type="checkbox"/> New Mexico	<input type="checkbox"/> Saint Pierre and Miquelon (FR)
<input type="checkbox"/> Arizona	<input type="checkbox"/> Louisiana	<input type="checkbox"/> New York	<input type="checkbox"/> Saskatchewan
<input type="checkbox"/> Arkansas	<input type="checkbox"/> Maine	<input type="checkbox"/> Newfoundland and Labrador	<input type="checkbox"/> South Carolina
<input type="checkbox"/> British Columbia	<input type="checkbox"/> Manitoba	<input type="checkbox"/> North Carolina	<input type="checkbox"/> South Dakota
<input type="checkbox"/> California	<input type="checkbox"/> Maryland	<input type="checkbox"/> North Dakota	<input type="checkbox"/> Tennessee
<input checked="" type="checkbox"/> Topo North America (340 MB)	<input type="checkbox"/> Massachusetts	<input type="checkbox"/> Northwest Territories	<input type="checkbox"/> Texas
<input checked="" type="checkbox"/> OpenStreetMap (196 MB)	<input type="checkbox"/> Mexico	<input type="checkbox"/> Nova Scotia	<input type="checkbox"/> Utah
<input checked="" type="checkbox"/> Digital Atlas of the Earth (69 MB)	<input type="checkbox"/> Michigan	<input type="checkbox"/> Nunavut	<input type="checkbox"/> Vermont
<input type="checkbox"/> Colorado	<input type="checkbox"/> Minnesota	<input type="checkbox"/> Ohio	<input type="checkbox"/> Virginia

5. Once selected, the region and map types will highlight in **green**, indicating they are ready to be synced

to your inReach device.

8. You're now ready to sync your inReach Explorer+. Navigate to the **Sync** tab and select **Launch inReach Sync** to begin the sync process.

Addition Details: About Map Types

Topo North America

(Select the Topo option on the Map tab while viewing the United States, Canada, or Mexico to see the map detail.)

A high-detailed topographic dataset with features such as contours with elevation, geographic locations, place names, landmarks, points of interest, hydrographic features, and land-use or land-cover detail. Map detail is consistent and coverage in rural areas is unparalleled.

Digital Atlas of the Earth

(Select the Topo option on the Map tab while viewing the map outside of the United States, Canada, or Mexico to see the detail.)

The Digital Atlas of the Earth (DAE) is a medium-detailed, complete, seamless, global dataset, and includes all the world's continents and countries. It provides a consistent level of detail and reliable horizontal accuracy for features worldwide. The DAE includes major transportation layers, inland and shoreline hydrography, agreed and disputed jurisdiction boundaries, place names, and major topographic features including contours with elevation, and land-use or land-cover detail. This data is topological, routable, and GPS navigable. DAE medium-detailed data is also available for the United States, Canada, and Mexico, if available memory is limited.

OpenStreetMap

(Select the OpenStreetMap option on the Map tab to see the map detail.)

OpenStreetMap (OSM) is a community-developed mapping dataset, developed and added to by community mappers around the world. In populated areas of the world, OSM is a highly detailed dataset. In many rural areas of the world, OSM has medium- to low-detailed data. Features are added and edited by community members with local knowledge. Coverage of features may vary and includes geographic locations, place names, landmarks, points of interest, hydrographic features, and land-use/land cover. OSM is an open data source. OSM also includes an open data source elevation dataset.

Public Land Survey System

Public Land Survey System (PLSS) is a subdivision and description of land in the United States based on a rectangular system of surveys. Typically, the land is divided into 6-mile square townships. The townships are divided into 36 1-mile square sections. Available in most states.

Game Management Units

Areas or units defined by each state used to regulate and define hunting boundaries by either species or seasons, or by both species and seasons.

Public Lands

Lands held and maintained by the United States Government in trust. Examples of lands included are Bureau of Land Management, Bureau of Reclamation, and State Trust Lands.
