Using Active Collection on the Explore Portal

Administrator - 2018-09-19 - Comments (0) - How-To

Active Collection controls where new data is transferred from the inReach device to the Explore Website when syncing from the Earthmate app, or inReach sync. Data transferred to a Collection instead of the Library directly will still appear in the Library.

Data transferred by Active Collections:

- Waypoints
- Routes
- Tracks

Using Active Collections

1. Go to inReach.garmin.com
2. Log into your account
3. Select the **Devices Tab**
4. Use the drop down menu to select a Collection for data to automatically sync to
